How to make pixel art with AI

Three steps from an idea to a piece of pixel art.

1

Describe your idea

Type the subject and style — for example, a 16-bit rogue with a dagger. Naming the era (8-bit, 16-bit) and the palette gets you closer.

2

Generate and refine

Review the pixel art, adjust your wording, and generate again to try different characters, creatures, or color palettes.

3

Take it into your project

Use the pixel art as a concept or asset; for a game you can tidy the grid and palette in a pixel editor to make it engine-ready.
